WEB CATALOGUE & USER MANUAL

Features & buildings

Placeable buildings, bank accounts, NG cash, inventory buyback and hotel rentals for Minecraft 1.20.2 with Forge 48.1.0 and Java 17.

Bank

Open an account with the bank employee: one-time starting balance of EUR 250. Personal credit card with a four-digit PIN, wallet with 54 cash slots, and an ATM for deposits and withdrawals.

Buyback shop

Sell vanilla blocks and selected resources straight from your player inventory. Material- and recipe-based prices; cash or account credit. Both share a EUR 2,000 limit per player over a rolling one-hour window.

Hotel

Two separately locked rooms, reception, indoor staircase, payment terminal, room display and lost-property storage. Book 1 to 7 Minecraft days at EUR 5 per day.

Larger hotel rooms

New hotels have a 19 × 19 block footprint and are 11 blocks tall. Room 1 measures 6 × 10 blocks inside; room 2 measures 7 × 10. Beds and barrels are placed to the side or towards the back, leaving a clear route behind each room door.

Preview & packing

Hold a building kit to see its outline, entrance and dimensions. Pack unchanged, empty buildings through the exterior sign. Placement and preview use the same blueprint.

Digital menus

Banking, selling, ATM and hotel use digital control panels. The ATM and hotel terminal have modern custom models. Enter the PIN using mouse or keyboard.

WEB CATALOGUE & USER MANUAL

Items & devices

Building kits

The shared chest near world spawn contains one bank kit, hotel kit, shop kit and starter guide. No personal crates and no refills.

Personal items

Wallet, credit card and room key. Wallets and cards belong to a player UUID. A room key matches its player, hotel, room and active booking.

Coins

10 cents, 20 cents, 50 cents, EUR 1 and EUR 2. Every denomination has separate front and back textures.

Banknotes

EUR 10, EUR 20 and EUR 50, each with front and back textures. All monetary values are NG in-game currency. No 1-, 2- or 5-cent coins and no EUR 5 banknote.

Devices & blocks

ATM, payment terminal, lost-property storage, hotel room display and locked room door. Hotel devices must belong to a registered hotel.

WEB CATALOGUE & USER MANUAL

Instructions: getting started & banking

1. Install

Replace the previous NG-City JAR with the new file. Keep only one NG-City version in the mods folder. Forge servers and clients need the same mod. Back up your world before switching.

2. Shared starter chest

One shared chest near world spawn contains the bank, hotel and shop kits plus guide. Login chat gives its coordinates. No personal starter crates or refills. Worlds that received starter sets under the old system do not receive another set.

3. Place a building

Hold a kit and inspect the preview. Right-click the top of solid ground; the entrance faces you. The entire site must be empty, loaded, supported and buildable. The bank and shop each require 11 × 10 × 6 blocks; the new hotel requires 19 × 20 × 11, including the entrance step.

4. Account & wallet

Right-click the bank employee and choose to open an account. Right-click your wallet to open it; it accepts NG cash only. The bank replaces lost cards and wallets. A replacement card disables the previous card and needs a new PIN at the ATM; a replacement wallet accesses the same stored cash.

5. ATM

Keep your valid personal card in your inventory. Right-click the ATM. On your first visit, choose four digits using the number buttons and confirm with green; the PIN is saved on your card. Enter it again on every later visit. Then select a denomination or EUR 10/20/50/100. Cash appears in your inventory. The deposit button deposits all loose NG cash from your inventory; take cash out of your wallet first.

WEB CATALOGUE & USER MANUAL

Instructions: selling goods

1. Keep goods in your inventory

You do not put goods into a chest. Carry eligible vanilla blocks or resources in your normal inventory, then right-click the shop employee. A bank account is required.

2. Check the offer

The menu lists your available goods with minimum quantity and payout. Hover over a goods icon to read its label. Use the arrows to switch pages when needed.

3. Choose payout

Use the bottom-left button to choose cash or account credit. Credit increases your account balance; cash goes into your inventory. The remaining shared hourly allowance appears at the top.

4. Left-click to sell

Left-clicking an icon immediately sells the largest matching quantity of that item within your remaining allowance. There is no custom quantity selector or extra confirmation. Store any quantity you want to keep outside your inventory before selling.

5. Automatic payment

Eligible quantities are removed from your inventory and paid. Insufficient minimum quantity or cash inventory space rejects the sale. Items with custom data and filled containers are not accepted.

Price examples & allowance

Default examples: 64 dirt = EUR 0.10; 32 stone = EUR 0.10; 1 diamond = EUR 5; 1 diamond block = EUR 45. Processed variants depend on recipes and materials. The offer shown in your world is authoritative. Cash and account sales share EUR 2,000 per rolling real hour; there is no midnight reset.

WEB CATALOGUE & USER MANUAL

Instructions: hotel & replacing buildings

1. Book a room

Right-click reception or the hotel terminal. Choose payment at the bottom left, select a free room, adjust 1 to 7 days with minus/plus and click the payment-and-key button. Every card payment opens a fresh PIN prompt; enter four digits and confirm with green. Lost-property retrieval paid by card also requires the PIN each time. Set the initial PIN at an ATM first. Have a valid card and account funds, or enough cash and room for change.

2. Use your room

Hold the key in either hand and right-click your room door. It closes after two seconds. The room display shows free rooms in green, or the guest name and remaining days. Select your own booked room at reception to replace a lost key.

3. Booking expiry

Minecraft daytime counts, including skipped nights. At expiry the key becomes invalid and anyone still inside the room is moved to the lobby. You can discard the old key. Belongings left behind are stored.

4. Retrieve belongings

Retrieve items through reception or lost-property storage and pay the displayed fee: by default EUR 1 per started Minecraft day for each stored booking package. Alternatively confirm disposal. Unclaimed belongings are destroyed after 7 Minecraft days.

5. Get the larger hotel

Existing small hotels do not automatically expand into their surroundings. Finish bookings, retrieve belongings, empty barrels and remove occupants and dropped items. With an empty main hand, sneak and right-click the exterior sign to pack the hotel. With the new JAR installed, place the returned kit on a sufficiently large empty site.

Help & settings

/ngcity anleitung gives a new guide; /ngcity startkiste reports shared-crate status to administrators. Prices and limits are configured in <world>/serverconfig/ng_city-server.toml in ten-cent units. NG-Verkehr and NG-Fahrzeuge remain independent; economy integrations follow separately. Single-player accepted by the owner; multiplayer follows after the interface rebuild.

WEB CATALOGUE & USER MANUAL

Equipment & current acceptance

Buy equipment

Open Buy equipment at the top right of the shop menu. Ten items: iron helmet, chestplate, leggings, boots, sword, pickaxe, axe, shovel, hoe and shield. Each player gets each item once for EUR 5; the first complete set is EUR 50. Later purchases use the displayed regular price. First purchases persist.

Regular prices

Helmet EUR 10, chestplate 16, leggings 14, boots 8, sword 8, pickaxe 12, axe 12, shovel 6, hoe 8, shield 8. Choose cash or card at the bottom left; one item per click. Each card purchase requires the PIN. Next displays more items.

Corrections

Packing from the entrance step fixed. Employees face customers. Bank and hotel reception benches moved one block left. Pack and replace older buildings to get larger rooms and shifted benches.

Single-player acceptance

On 19 October 2026 the owner confirmed all current NG-City features tested in single-player: shared chest placed near world spawn, all contents present and all three buildings placeable. Multiplayer testing follows after the ongoing Minecraft interface rebuild. No MC02 deployment or joint economy integration acceptance.
