PROJECT CATALOGUE · PLANNING STATUS

NG-City

The foundation for your city.

Planning · 18 October 2026 · No mod build available

NG-City is intended to provide the shared foundation for the NeverGate city and its economy. Traffic, vehicles and future extensions can connect to it.

01 / Goal

Build a complete Minecraft city step by step: NG-City connects economic operations across participating NG projects through one shared foundation.

02 / Three independent mods

NG-City, NG-Verkehr and NG-Fahrzeuge remain separate projects and JAR files.
NG-Verkehr and NG-Fahrzeuge must continue to work independently without NG-City.

03 / Economy requires NG-City

Economic features are active only when NG-City is actually installed and its integration is available. Without NG-City, the traffic and vehicle mods have no active money accounts, economic prices, fees, payments or substitute currency.

04 / Shared responsibilities

NG-City provides the central economic foundation. NG-Verkehr supplies roads and traffic technology; NG-Fahrzeuge supplies vehicles and vehicle features. Accounts and money movements are not maintained separately in every mod.

05 / Future integration examples

A parking facility from NG-Verkehr could process a payment through NG-City. A vehicle purchase could use the same central economy. These examples are not implemented or tested features.

06 / Decisions still open

The first feature scope, currency, starting balance, accounts or cash, land ownership, city administration, businesses and jobs remain undecided. The integration interface, persistence and behaviour when NG-City fails or is removed must also be agreed.

Future testing and approval

Before approval, test the individual mods, traffic and vehicles together without NG-City, and all three mods with compatible integration. Include multiplayer, restarts, persistent data, missing counterparts and prevention of duplicate payments. A failed or uncertain payment must never be treated as paid.

Current status

This catalogue documents confirmed planning. It is not an installation or user manual for a finished mod. Existing traffic and vehicle builds have not automatically been adapted to the new target behaviour.
